# Senior Software Engineer - Full Stack

**About Us:**

We are a leading technology company specializing in building secure and scalable online examination and assessment platforms. Our solutions help educational institutions and corporations conduct seamless online tests and evaluations.

**Key Responsibilities:**

- Design and develop secure online examination systems

- Implement anti-cheating measures and real-time proctoring features

- Create robust test evaluation and grading modules

- Develop RESTful APIs for system integration

- Optimize application performance and scalability

- Collaborate with UX designers for intuitive test interfaces

**Required Skills:**

- 5+ years of experience in full-stack development

- Strong expertise in Python and JavaScript

- Experience with React.js and Node.js

- Knowledge of database systems (SQL and NoSQL)

- Understanding of authentication and security principles

- Experience with cloud platforms (AWS/Azure/GCP)

**Education:**

Bachelor's or Master's degree in Computer Science, Software Engineering, or related field
